Stamp Coils:	3 +/- 10,000
Operational Skills:	no special skills required
Affordability:	Yes! Reasonable initial cost with very high production capabilities. Accelerated return on investment.

Don't go digital — you have a choice!

Applying stamps has never been more efficient than with the **POSTMASTER**. You can now apply stamps at high speed off your inkjet or inserter, or just feed it as fast as you like without adjustments—up to 25,000 pieces per hour. And that's "production speed"—not "cycle speed." Just think of the money you can save at these speeds just in hours saved alone!

- No expensive ink cartridges to buy
- Run it in-line with your inserter
- It has the same footprint as R150, which allows it to drop right in, roll up to your inkjet and run with no speed adjustment
- Get the job out faster at the end of the day when deadlines are so important
- Handles 3,000 to 10,000 rolls of stamps with our new patented stamp holder—no more stamps unrolling onto the floor
- Best of all—no more vacuum pumps to rebuild or clean
- The **POSTMASTER** is specifically designed for low maintenance
- Its rugged design is built for years of money-saving service
- No more postage meter heads to change for stamping or metering
- No worrying about obsolescence or finding parts for your old meter base
- Good News! It's all one unit, at one price—no special training or skills needed to operate it
- Plug & Play—Made in the USA!!!
